Problem statement :

A room without books is like a body without a soul. All of us know that in these testing times it is better to use a soft copy or order it online as we should not go out lest very necessary.

Explanation of the idea :

Although our idea is not unique, since we are facing it for the very first time, but we try to implement as per our intellect. We have integrated the idea of downloading the softcopy and ordering the hardcopy under the same umbrella.

Solution :

In this website, we are trying to give ample amount of book resources in softcopy as well as hardcopy. We are making a web page which provides front page of the book to give visual effect of the book, it has a small description about the book and its contents. We are trying to provide a search option in order to search a book by name rather than scrolling whole page and a feedback form in order to get reviews and feedbacks from visitors on our page.

Practicality :

We are all aware of the importance of books. Our idea implements an Online mode of Library. An Online Library provides you with access to an amazing range of online resources to explore the subjects you are passionate about. We will also help you to develop skills that will support you as you study, at work or in everyday life. The online library gives you access to quality-assured and trusted resources that are selected and assessed by subject specialists and academics.

Thank you !!
